

## Khatod will showcase new products

Khatod will showcase new products such as the Thetalens and Power LED Heatsinks series of lenses, which join the many custom-products created by customers' specification requests.

The new Thetalens, available in Narrow, Medium and Wide Beam, complies with AR111. The cover color can be customized to meet the product aesthetic requirements.

Khatod will introduce its own lenses, using NJC™ Technology. This new series introduces an innovative coupling system between lens and LED which eliminates production costs by hot riveting the pegs to the PCB.

The new series of Power LED Heatsinks has been created by using a new injection system, which allows an improved integration of the LED-lens-heatsink system.
