

# KHATOD

Imaging & Sensor Lenses

During its 35-year history Khatod has committed to developing high-end optical solutions and guaranteeing top-quality technical support.

In addition to an extensive range of standard optics, Khatod's qualified team supports its partners in the development of customized solutions specifically tailored to their needs. Every project is followed from the initial design and all along the product processing and mass production.

Khatod's range of optics allows to achieve a twofold result:

- Collimate the radiation from different sources such as LEDs, laser diodes and VICSELS.
- Focus the radiation collected on receivers, like photodiodes and linear CCDs.

The main advantage stands in the possibility of engineering both the optical and the mechanical part in a single component.

Thanks to the extensive selection of materials we are able to work with a wide range of frequencies, covering from UV to the near-infrared.
