Assembly Specifications

Determination of thermal shock resistance degree

Initial Visual Inspection

Before starting with testing, a visual inspection was performed in order to check the integrity of the part under test.

The part resulted physically intact.

Temperature set in the climatic chamber

Temperature detected on the part by IR thermal camera

The temperature test was performed to detect the sealing degree of the material. The reference temperature of the component under test is 60° C, and the test was performed with the PCB turned on. Reference PCB: 48 Osram LEDs Oslon Square Gen3, current driven 700mA.

Final Visual Inspection

After testing, a final visual inspection was performed. The result was positive. (view photo)

Data and Analysis

The sample has been subjected to the water-penetration resistance test as follows:

- Assembly of the components to test :
A moisture indicator paper sheet has been interposed between the lens and the clamping base
- Positioning of the assembled sample under the watering device with nozzle Ø 6.3 millimeters
- Water flow: 12.5 l/min ± 5%
- Water pressure: 30 kPa @ distance of 3m
- Duration of water spraying test on the wrap surface per m² : 1 min
- Minimum duration of the test: 3 min
- Distance between the nozzle and the wrap surface: 2.5 Meters
- Torque: 0,7 Nm.
